1. My computer model and OS version
   I'm using a Lenovo ThinkPad X240s running on 64-bit Windows Operating System.

2. Where am I in completing pset0
   I completed pset 0 entirely on Nov 2nd.

3. Technical difficulties I come across, how I have overcome them
   I ran into an error message when trying to open the StatClass2 image on Virtual Box. It read "VT-x/AMD-V hardware acceleration is not available on your system. Your 64-Bit guest will fail to detect a 64-bit CPU and will not be able to boot." I searched the internet, in particular Stackoverflow and Youtube to find the solution. Following the instruction, I succeeded eventually.

4. The help received from someone or some useful sites
   I mostly managed on my own, though got reassured by going through the whole process with John. This Youtube video was extremely helpful
